

SPECIALIST:

DR. MANUEL CIFRIÁN PÉREZ

(Interventionist Radiologist specialized in pain treatment)

www.linkedin.com/in/manuelcifrian

- Doctor in Medicine and Surgery by the Medicine University of Valencia.
- Masters in Clinical and Medical Management by the UNED University of Madrid.
- Certificate as Interventionist Pain Expert by the Worldwide academy of Pain Medicine Ultrasonography, WAMPU certification and Worldwide Pain Institute (WIP).
- PhD studies in the Autonomous Barcelona University (UAB).
- Minimally Invasive Techniques Expert for oncology patients and pain treatment.
- Vascular, non-vascular and musculoskeletal intervention procedures (minimally invasive techniques).

UTEMI SERVICE Unit of Minimally invasive Techniques for Pain Treatment

Dr. Manuel Cifrián

CERVICAL, BACK, SHOULDERS, KNEE, HIP... PAIN
TREATMENT WITH NO SURGERY.

THE UNIT FOR MINIMALLY INVASIVE TECHNIQUES FOR PAIN TREATMENT is a full unit for the valuation and treatment of the patient with musculoskeletal pain, oncology rachis level, cervical, back, shoulder, knee, hip, etc. based in Interventionist Radiology.

A complete valuation of the patient through a physical check-up and, later, a personalized treatment.

Main advantages:

- Total valuation of the patient
- Personalized treatment
- Fast recovery
- More than 50 innovating techniques for pain treatment:
 - Minimally invasive techniques
 - Innovating techniques
 - Efficient techniques for pain treatment
 - Safe techniques (always imaging-guided)
 - Less invasive techniques than conventional surgery

PAIN TREATMENT

About the benefits obtained with these techniques, comparing the results with surgical solutions used till now, it is verified that offers the same efficiency for pain elimination, with the advantage that it is a **minimally invasive intervention** and moreover you can have other kind of future interventions if the result is not the expected.

The combination of radiology and interventionism enables to perform a wide variety of advanced techniques for interventionist treatment.

The use of different imaging techniques (fluoroscopy, CT and ultrasound) allows us to perform different treatments in a safe, fast and effective cost way.

Combined a good imaging guideline and an experienced interventionist in this field, it can be offered a package of techniques that nearly always are done in an outpatient way, offering lots of advantages compared to conventional surgeries (immediate results, less cost and morbidity, etc.

INTERVENTIONISM TECHNIQUES PORTFOLIO

More than 50 interventionism techniques with minimally invasive techniques for pain treatment:

- **Facet pain treatment**
- **Herniated disc treatment**
- **Vertebral facet treatment**
- **Discongenic pain treatment**
- **Regenerative medicine: stem cells treatment**
- **Back failure surgery syndrome treatment**
- **Foraminal and spine stenosis treatment**
- **Sacrum iliac pain treatment**
- **Tumorous lesions treatment**
- **Oncologic pain treatment**
- **Musculoskeletal pain treatment**
 - Shoulder pain
 - Hip pain
 - Knee pain
- **Peripheral muscles and nerves treatment**
 - Pyramidal syndrome (pseudo-sciatica)
 - Peripheral neuralgia
 - Joint and muscles pain
 - Morton's neuroma
 - Ultrasound-guided radiofrequency
 - Cardio-ablation and pain with ultrasound guide
 - Face pain
- **High blood pressure treatment**
- **Varicose vein treatment / venous failure**
- **General interventionism treatment**
 - Non-vascular interventionism
 - Vascular interventionism
- **Thyroid nodes without surgery treatment**
